The present sequence is that of novel human extracellular messenger
(EXMES) Incyte ID NO: 7513018CD1 polypeptide. The protein shows homology
to human megakaryocyte stimulating factor. The invention provides EXMES
polymucleotides and polypeptides, as well as expression vectors, host
cells, antibodies, agonists and antagonists, and methods for diagnosing,
treating or preventing disorders associated with aberrant expression of
EXMES, especially autoimmune and inflammatory disorders, cell
proliferative disorders and endocrine disorders, e.g. adult respiratory
distracts syndrome, allergy, anaemia, erythroblastosis foetalis, Crohn's
distracts mellitus, myasthenia gravis, osteoarthritis,
osteoporosis, pancreatitis, psoriasis, viral, bacterial, fungal,
parastic, protozoal or helminthic infections, cancers, autoimmune
thyroiditis, cretinism, Plummer's disease or thyroid carcinoma.
Embodiments also provide methods for using the purified EXMESs and/or
their encoding polymucleotides for facilitating the drug discovery
process, including determining of efficacy, dosage, toxicity and
pharmacology, and for investigating the pathogenesis of diseases and
medical conditions. Claim 60; SEQ ID NO 5; 165pp; English

The tribonectin has at least one 0-linked oligosaccharide lubricating moiety and has a polypeptide sequence comprising 1-76 of a motif having at least 50% identity to the sequence KRPAPTT (AAB2977A). The invention also relates to a nucleic acid encoding MSF-derived tribonectin, a biocompatible composition comprising a treating Novel tribonectin polypeptide useful as lubricant for osteoarthritis, comprises O-linked lubricating moiety ISLAND HOSPITAL LIFESPAN PARTNER FFKRGGSIQQYIYKQEPVQKCPGRRPALNYPVYGE FFKRGGSIQQYIYKQEPVQKCPGRRPALNYPVYGE Ą Disclosure; Fig 1; 47pp; English. tribonectin for inhibiting tissue adhesion formation; and a method of diagnosing osteoarthritis or a predisposition to osteoarthritis by measuring the amount of MSF or its fragment in a biological sample of a mammal, wherein an increased amount of MSF compared to a control indicates the presence of or predisposition to developing osteoarthritis. The tribonectin and DNA encoding it are useful in the treatment of osteoarthritis, where they may be used for lubricating mammalian joints, such as articulating joints of humans, dogs or horses. The tribonectin, when formulated as a membrane, foam, gel or fibre, is useful for inhibiting adhesion between two surfaces such as the injured tissues of a mammal, where the injury is caused by a surgical insertion or trauma, or an artificial device e.g., an orthopaedic implant. In particular, one of the surfaces is pericardial tissue. DNA encoding a tribonectin may be used in gene therapy. The present sequence represents a substantial portion of a human MSF-derived tribonectin.

from human cDNA libraties which can be used for gene therapy or in vaccines. The polymucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue This invention describes novel polynucleotides and polypeptides isolated sequences of clones isolated from libraries of useful in recombinant DNA methodologies. described in the disclosure of the invention Human; gene therapy; vaccine; disease treatment; detection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequences of human superficial zone protein (SZP). The protein is involved in the lubrication of joints, and the sequences can be used in the treatment of degenerative joint conditions or to delay symptoms of a degenerative joint condition, e.g. osteoarthritis, rheumatoid arthritis, gout, psoriatic arthritis, reactive arthritis, wiral or post viral arthritis, spondylarthritis, juvenile arthritis, sprovitis, tendonitis, systemic lupus erythematosus, CACP, osteoporosis or trauma. The present sequence is the protein encoded by the human 3' cartilage SZP cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                      New purified superficial zone protein (SZP) polypeptides, useful for treating degenerative joint conditions, e.g. osteoarthritis, rheumatoid arthritis, gout, spondylarthritis, synovitis, tendonitis, lupus, or osteoporosis.
antirheumatic; osteopathic; antigout; antiinflammatory; dermatological; immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HMLLRPHVFMPEVTPDMDYLPRVPNQGIINPMLSDETNICNGKPVDGLTTLRNGTLVAF

The polymocleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a homologue of a polypeptide described in the disclosure of the invention 0 LPNVVTSAISLPNIRKPDGYDYYAFSKDQYYNIDVPSRTARAITTRSGQTLSKVWYNCP 1361 283 61 NSDISKETSLIVNKETIVETKETTINKQISIDGKEKTISAKETQSIEKTSAKDLAPISK 120 284 VLAKPTPKAETTTKGPALTTPKEPTPTTPKEPASTTPKEPTTTIKSAPTTPKEPAPTTT 343 9 LPNVVTSAISLPNIRKPDGYDYYAFSKDQYYNIDVPSRTARAITTRSGGTLSKVWYNCP 538 This invention describes novel polynucleotides and polypeptides isolated Nucleic acids having the sequences of clones isolated from libraries of different human tissues, useful in recombinant DNA methodologies. 420 PALNYPVYGEMTQVRRRRFERAIGPSQTHTIRIQYSPARLAYQDKGVLHNEVKVSILWRG AGYPKPIFKGFGGLTGQIVAALSTAKYKNWPESVYFFKRGGSIQQYIYKQEPVQKCPGRR RIKKKPIPKPPVVDEAGSGLDNGDFKVTTPDTSTTQHNKVSTSPKITTAKPINPRPSLPP 1 RIKKKPIPKPPVVDEAGSGLDNGDFKVTIPDISTIQHNKVSTSPKITTAKPINPRPSLPP NSDISKETSLIVNKETIVETKETITINKQISIDGKEKTISAKETQSIEKTSAKDLAPISK .; 0 513; Human; gene therapy; vaccine; disease treatment; detection.
